| BR        | AREA: SHEET: 14 of 44  |  |  |  |  |  |
| PETROBRAS | TITLE:         MEDIUM-VOLTAGE MOTOR CONTROL CENTER AND         INTERNAL  |  |  |  |  |  |
|           | SWITCHGEAR FOR OFFSHORE UNITS ESUP   |  |  |  |  |  |
| 4.13      | .1 For Panels  |  |  |  |  |  |
|           | 4.13.1.1 Each vertical section shall be provided with heating resistors proper to 220VAC, installed at the lower part and protected by circuit-breakers. These heating resistors shall be automatically controlled, through a thermostat, with maximum limit of the graduation range of 60°C.  |  |  |  |  |  |
|           | 4.13.1.2 The heating resistors shall be protected against accidental contacts. The wiring next to them (closer than 30cm), shall have proper insulation, in order to avoid damage due to high temperature.   |  |  |  |  |  |
|           | 4.13.1.3 At least one miniature circuit-breaker shall be provided per bar for interruption of all related cubicle heaters circuits of the panel.   |  |  |  |  |  |
| 4.13      | 2 For Motors   |  |  |  |  |  |
|           | 4.13.2.1 All medium-voltage motors shall have circuits to feed heating resistors fed from external source (same source of item 4.13.1), being automatically turned on by the respective functional unit when the motors are turned off.  |  |  |  |  |  |
|           | 4.13.2.2 One miniature circuit-breaker shall be provided in each vertical section or drawer, to protect the motors' heating resistors circuits.  |  |  |  |  |  |
|           | 4.13.2.3 For motors installed in hazardous areas Zone 1 and circuits for loads which cables cross hazardous areas Zone 1, the circuit-breaker for protection of the heating resistor shall have thermomagnetic unit with integrated or additional differential residual current protection.  |  |  |  |  |  |
|           | 4.13.2.4 Auxiliary circuits for motor space heaters shall be energized whenever the motor starter functional unit main circuit switching device is open, when either in the inserted or the test position;   |  |  |  |  |  |
|           | 4.13.2.5 Auxiliary circuits for motor space heaters shall be deenergized when drawer is in isolated position.  |  |  |  |  |  |
| 4.13      | .3 For Generators  |  |  |  |  |  |
|           | <ul> <li>4.13.3.1 All generators shall have circuits to feed heating resistors fed from external source (same source of item 4.13.1), being automatically turned on by the respective functional unit when the generators are turned off. The generator status signal shall be obtained from the generator control panel, according to I-LI-3010.00-5140-797-P4X-001 - ELECTRICAL SYSTEM AUTOMATION INTERFACE SIGNALS LIST.</li> </ul> |  |  |  |  |  |
|           | 4.13.3.2 One miniature circuit-breaker shall be provided in each vertical section, to protect the generators' heating resistors circuits.  |  |  |  |  |  |
|           | 4.13.3.3 For generators installed in hazardous areas Zone 1, the circuit-breaker for protection of the heating resistor shall have thermomagnetic unit with integrated or additional differential residual current protection.   |  |  |  |  |  |

#### 4.18.10 Cancelled.

- 4.18.11 Panels shall have warning labels indicating that any technical intervention in the panels shall be executed only for authorized people.
- 4.18.12 Panels shall have labels with brief description of the interlocks and allowed/forbidden momentary parallelisms in Portuguese language. For the allowed momentary parallelism, there shall be an additional label with details of the synchronization and load transfer operation. The label shall also include the document number which details the interlocks and momentary parallelisms.
- 4.18.13 Panels shall have labels with information about the control voltage supply characteristics in Portuguese language, including information about control voltage earthing and expected autonomy of the Unit's Battery Chargers.
- 4.18.14 Each functional unit shall have a label indicating the maximum continuous current capacity of the functional unit, protection functions parameterized and the related relay parameterization report.
- 4.18.15 Limiter cubicle shall have a label indicating clearly the blocking criteria implemented for the Limiter operation.
- 4.18.16 Functional Units with Grounding Switch shall have a label indicating clearly the interlock and inhibition of circuit-breaker closing.
- 4.18.17 Incomers Functional Units shall have a label indicating the TAG of the feeder panel.

|                 |                         | CONTROL CENTER AND                  | INTERNAL        |
|                 | SWITCHGEAR FOR          | OFFSHORE UNITS                      | ESUP            |

#### 4.19 Painting

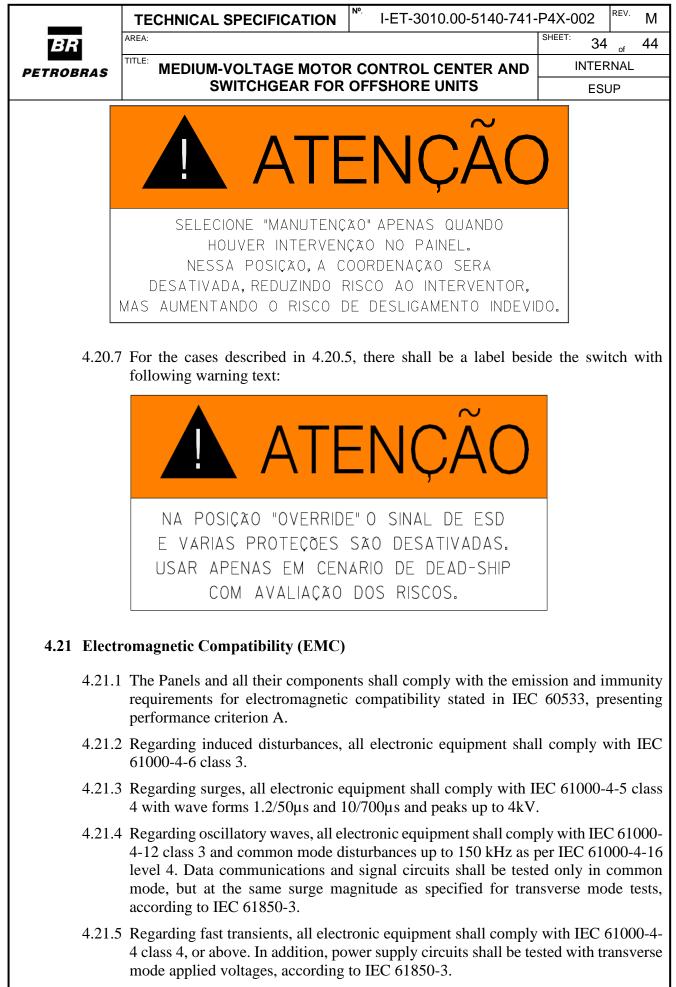

- 4.19.1 All electrical materials, equipment and supports shall be painted. Painting process shall be proper for offshore installations and shall comply with the requirements of I-ET-3010.00-1200-956-P4X-002 GENERAL PAINTING.
- 4.19.2 The last coat colour shall be Light Green Munsell notation 5G8/4. Inner components mounting plates, internal faces of doors and safety barriers shall be Safety Orange Munsell 2.5YR6/14.

#### 4.20 Protection

- 4.20.1 For general protection, minimum protection functions for each functional unit and adjustments criteria, refer to I-ET-3010.00-5143-700-P4X-001 ELECTRICAL SYSTEM PROTECTION CRITERIA.
- 4.20.2 Panels shall have one key activated selector switch in their front side with the positions "Operação / Manutenção" (Operation / Maintenance). When this selector switch is in "Manutenção" position, the instantaneous overcurrent function (50) of incoming and tie MMRs shall be activated, overriding protection coordination and minimizing damage in case of internal fault.
- 4.20.3 There shall be a local signalling lamp, turned on with the switch in "Manutenção" position, indicating "Coordenação Desativada".
- 4.20.4 There shall be a remote signalling of the position of the switch in Electrical System Automation Operational Workstation.
- 4.20.5 It shall be possible to close the functional units circuit-breakers or contactors listed in this item bypassing all necessary interlocks and protections (such as ESD and protection function 27) in a dead-ship scenario. The interlocks shall be overridden by a "OVERRIDE PROTECTIONS" switch installed in the front external part of each CDC or MCC Functional Unit. There shall be a label in this control switch with the following text "Atenção! Na posição "OVERRIDE" o sinal externo de ESD e várias proteções são desativadas. Usar apenas em cenário de dead-ship". The following Functional Units shall have this switch:

- MCC outgoings to transformers that feeds Auxiliary and Essential low voltage CDCs;

4.20.6 For the cases described in 4.20.2, there shall be a label beside the switch with following warning text:

4.21.6 Regarding electromagnetic disturbances, all electronic equipment shall comply with IEC 61000-4-3 class 3.
