1. SUBJECT

- 1.1 The subject of this document is to establish the criteria and basic characteristics for the detailed design, supply and installation of telecommunication Energy System that shall be installed in Topsides of PETROBRAS FPSO Unit and its interface with Hull.
- 1.2 The Telecommunication Energy System shall provide energy supply for some Telecommunication Systems in accordance with Brazilians and Internationals applicable standards and PETROBRAS requirements.

2. ABBREVIATIONS

ABNT	Brazilian Association of Technical Standards
AC	Alternating Current

- c. It shall be followed all others NR's Normas Regulamentadoras (Regulatory Standards) from Ministério do Trabalho (Brazilian Ministry of Labor) applicable to this Technical Specification.
- 3.2.3. DPC Departamento de Portos e Costas
 - a. NORMAM 01: Normas da Autoridade Marítima para Embarcações Empregadas na Navegação em Mar Aberto.
- 3.3 Classification Society
- 3.3.1. The detailed design shall be submitted to approval by Classification Society. The design and installation shall take into account their requirements and comments.

4. GENERAL REQUIREMENTS

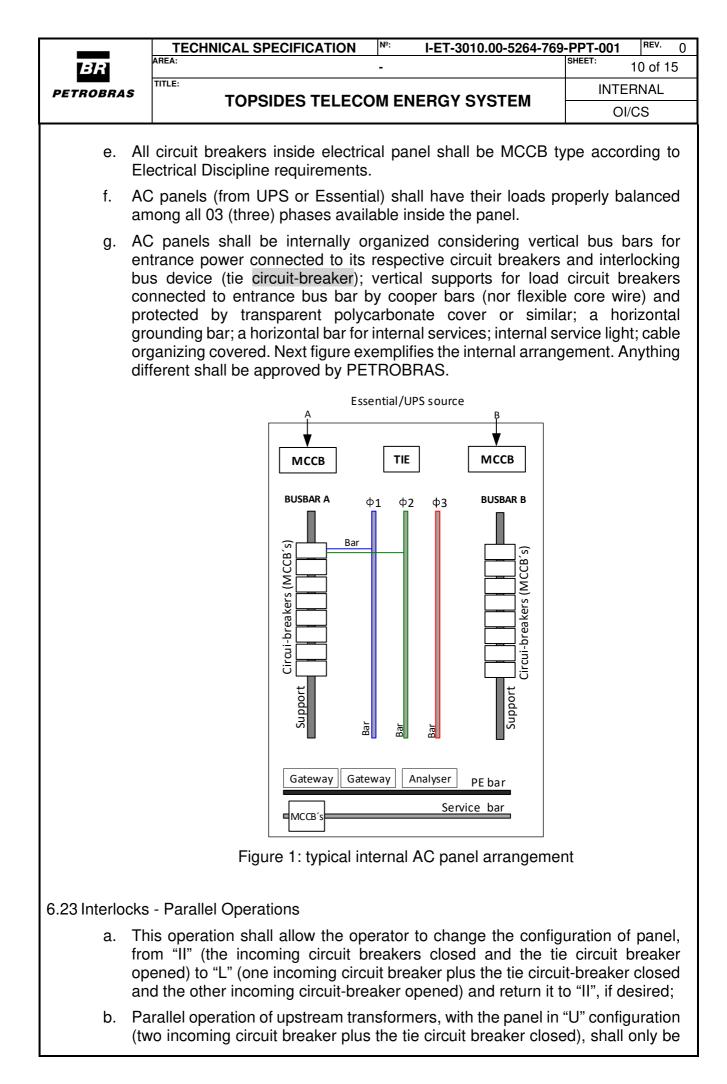

- 4.1 The telecommunications DC Energy System shall be dimensioned in accordance with standards, requirements and determinations from:
 - a. ANATEL / TELEBRAS (Brazilian Telecommunications Management);
 - b. International Convention for the Safety of Life at Sea (SOLAS);
 - c. Mobile Offshore Drilling Unit (IMO MODU CODE);
 - d. DR-ENGP-M-I-1.3-R.4- SAFETY ENGINEERING.
- 4.2 CONTRACTOR shall present the "Certificate of Technical Qualifying" (AQT) or the "Certificate of Grant" for DC Energy System, issued by Brazilian Telecommunication Government Agencies: ANATEL or TELEBRAS, according to the legislation in Brazil, to guarantee the quality of its products.
- 4.3 Electrical installations, equipment and materials shall comply with the requirements of IEC 60079, IEC 61892-7 and Classification Society.
- 4.4 All equipment, installations and materials shall be of type approved and certified by international recognized laboratory and shall be in accordance with INMETRO Portaria n° 115, March 21st 2022 and its annexes.
- 4.5 CONTRACTOR shall elaborate Calculation Report for DC Energy System, in accordance with Standards herein listed.
- 4.6 CONTRACTOR shall provide all necessary materials to install all equipment, accessories, cables and infrastructure that compose the DC Energy System.
- 4.7 For PETROBRAS detailed design requirements, Installation, Configuration, Tests training and commissioning CONTRACTOR shall comply with the DESCRIPTIVE MEMORANDUM I-MD-3010.00-5510-760-PPT-001 GENERAL CRITERIA FOR TELECOMMUNICATIONS DESIGN.
- 4.8 For telecommunications symbols, the Detailed Design shall comply with the Technical Specification: I-ET-3000.00-0000-940-P4X-002 SYMBOLS FOR PRODUCTION UNITS DESIGN.

6.21	DC	Electrical Panel
6.21.1.	Ge	eral guidance:
	a.	The DC electrical panel shall be defined in accordance with the operating voltages and group of equipment to which they will be interconnected;
	b.	The switchboards size shall be the sufficient to contain its own components and to allow the suitable arrangement for external connection cables;
	C.	DC electrical panel shall be wall-mounted or installed inside rack as it shall be a circuit from DC panel of Telecom Lower Room;
	d.	DC electrical panel shall have one thermo-magnetic circuit breaker for incoming circuit, for general protection, equipped with shunt-trip coil for remote command;
	e.	DC electrical panel internal bus-bar shall be of electrolytic copper;
	f.	The electrical panel shall be dimensioned to withstand the level of the short- circuit current obtained in the electrical studies;
	g.	All DC electrical panel shall have grounding terminals for 25 mm ² or greater cables;
	h.	All of the DC electrical panel shall have additional thermo-magnetic circuit breakers or fuses, of which the quantity and rated current, as well as its position spare cable, shall be defined during detail design. CONTRACTOR shall consider, at least, quantity 35% of circuit breakers or fuses in additional to spare or expansion;
	i.	It shall be provided an interface between DC electrical panels and CSS-HFGS according with I-ET-3010.00-5520-861-P4X-001 - CONTROL AND SAFETY SYSTEM – CSS in order to permit the selective charge disconnection in case of gas detect in antenna area installation.
6.22	AC	Electrical Panel
	a.	All AC electrical panels required for telecommunications energy system are described in Hull and Topsides telecommunications energy system one line diagrams.
	b.	All AC electrical panels required for telecommunications energy system shall be in accordance with I-ET-3010.00-5140-700-P4X-002 - SPECIFICATION FOR ELECTRICAL MATERIAL AND EQUIPMENT FOR OFFSHORE UNITS.
	C.	All AC essential and emergency (UPS) electrical panel shall have, at least, the quantity 35% of circuit breakers in additional to spare or expansion.
	d.	It shall be provided 01 (one) AC electrical interface panel to power each BLT in Topsides areas according to TOPSIDES TELECOMMUNICATIONS ENERGY SYSTEM ONE LINE DIAGRAM. Such electrical panel shall be connected to both UPS bus bars through an ATS device or similar, so that a failure in one bus bar does not affect the service. Such panel shall have 01 (one) circuit breaker for each BLTs plus 20% as spare fed by such automatic transfer switch device.

 6.27 Automatic Transfer Switch 6.27.1. The ATS device shall have the following features for installation inside cabinets: a. The ATS device shall provide reliable, redundant power to single-corded equipment loads. The ATS device shall have two input power cords supplying power to the connected loads. b. The ATS device shall have has built-in network connectivity, which allows for remote management via Web, Telnet, SNMP and SSH. c. Input: 02 (two) inputs for two separate power sources (A, B). d. Outputs: 08 (eight) outputs (minimum) to power equipment. e. Transfer time: 10ms maximum. f. Visual singling operation mode indication by frontal LEDs. g. 19" standard for rack installation. 6.27.2. The ATS device shall have the following features for installation inside electrical panels: a. The ATS device shall provide reliable, redundant power to single-corded equipment loads. The ATS device shall provide reliable, redundant power to single-corded a panels: a. The ATS device shall provide reliable, redundant power to single-corded equipment loads. The ATS device shall provide reliable, redundant power to single-corded equipment loads. The ATS device shall have 02 (two) input power cords supplying power to the connected loads. b. Input: 02 (two) inputs for two separate power sources (A, B). c. Outputs: assembled to be connected to terminal born and circuit breakers that will power the device. d. Transfer time: 10ms maximum. e. In case of failure, it shall bypass to just one source. f. It shall be according to classification area to be installed. 7. SCOPE OF SUPPLY 7.1 CONTRACTOR shall be responsible to supply, install, test and commission the Energy System for Telecommunications Systems in PETROBRAS FPSO Unit, within the scope of the Contract and in accordance with this Technical Specification 				Figure 4: sche	matic interconned	ctions
