1. MAIN OBJECTIVE

This document aims to list and organize the structural steel plates and profiles based on standards, supplier catalogs and past projects to be used in the design of steel structures of floating or fixed platform's topside.

In the listed tables are presented some information of the sections that are usually required for structural dimensioning and material list such as dimensions, geometric properties, unit weight and painting area.

For structural profiles, the tables presented are oriented according to the type of section and standard nomenclature reported in the reference catalogs, if any, and cover the following sections:

- I. I / H profile
 - a. I / H welded (BR sections)
 - b. W / HP
- II. Angle bar
- III. Channel bar
- IV. Tubular profile
- V. T / WT profile
- VI. Square bar
- VII. Flat bar
- VIII. Round bar

Finally, standardized nomenclatures are presented for use in structural analysis software, following requirements compatible with the computational language and restrictions of the commonly used softwares.

3. GLOSSARY

- **Angle bar**

Rolled bar with a cross section in the form of a L;

- **Channel bar**

Rolled bar with a cross section in the form of an U;

- **Flange**

Horizontal elements which compose a structural section and are responsible for resist most of the bending moment experienced by a linear structural element;

- **Flat bar**

Rolled bar with rectangular cross section;

- **HP profile**

H profile with double-symmetry and parallels flanges with the same thickness of the web element;

- **Rolling**

Metal forming process in which metal stock is passed through one or more pairs of rolls to reduce the thickness and to make the thickness uniform;

- **Round bar**

Rolled bar with circular cross section;

- **Square bar**

Rolled bar with square cross section;

- **T profile**

Monosymmetry profile composed by one flange and one web;

- **W profile**

I and H profiles with double-symmetry and parallels flanges in which are thicker than web element;

- **Web**

Vertical element which compose a structural section and is responsible for mainly resists shear forces;

- **Welded I/H profile**

Structural element composed by three steel shapes joined through electric arc welding, forming approximately an I or H;

- **WT profile**

T profile obtained from the mid-depth cut of W or HP sections;

- **Symbols**

b_f / b – flange width

C_w – warping constant

d – section diameter or height

H – flexural constant

I_x – moment of inertia of the section about its major axis

I_y – moment of inertia of the section about its minor axis
 J – torsional moment of inertia
 Q – first moment of area
 Q_f – first moment of area at point of intersection between web and flange
 Q_w – first moment of area at mid-depth of the section
 R_0 – polar radius of gyration
 R_p – radius of gyration about the principal axis
 R_x – radius of gyration about the major axis
 R_y – radius of gyration about the minor axis
 S_w – warping statical moment
 t – plate thickness
 t_f – flange thickness
 t_w – web thickness
 U – painting area
 W_{n0} – normalized warping function
 W_x – elastic section modulus about the major axis
 W_y – elastic section modulus about the minor axis
 X_g – position of centroid on X axis
 X_p – horizontal distance from designated member edge to plastic neutral axis
 Y_g – position of centroid on Y axis
 Y_p – vertical distance from designated member edge to plastic neutral axis
 Z_x – plastic section modulus about the major axis
 Z_y – plastic section modulus about the minor axis

4. TABLES OF STRUCTURAL PLATES AND PROFILES

The lists of structural plates and profiles with their main properties and standardized names for insertion in structural analysis software are presented hereinafter.

4.1. STANDARD NOMENCLATURE

The structure of the standard nomenclature was established in order to enable its using in a clear and comprehensive way to any FEM software. Therefore, it obeys the following rule:

XAAAA-N, where:

X – Indicates the type of structural profile or plate

A – Approximate profile height or plate thickness in millimeters

N – Sequential number to distinguish section names with same height or thickness

4.2. PLATES

Plates thicknesses are standardized according to Brazilian steel mills information and good engineering practices and are presented in Table 1.

4.3. STRUCTURAL PROFILES

4.3.1. I / H PROFILE

I / H profiles are obtained from two different references as described in sections 4.3.1.1 and 4.3.1.2, and their dimensions are according to the follow cross section:

4.3.1.1. Welded I / H profiles (BR sections)

I / H profiles generated from welded plates with standardized thicknesses and greater dimensions which are not listed in any supplier catalog. Table 2 to Table 9 were based on a compilation among process modules projects of Petrobras Platforms, steel mills information and good engineering practices.

4.3.2. ANGLE BAR

Rolled profiles obtained from ABNT NBR 15980:2011 – Perfis laminados de aço para uso estrutural – Dimensões e tolerâncias [2]. Figure 2 presents its cross section and Table 14 and Table 15 present their properties and dimensions.

4.3.4. TUBULAR PROFILE

Hollow and circular section obtained from Catálogo Tubos Estruturais Vallourec – Seção Circular, Quadrada e Retangular [4] (diameter up to 355.6mm) and good engineering practices (diameter greater than 355.6mm). Figure 4 presents its cross section and Table 17 to Table 22 present their properties and dimensions.

Listed sections comprise both seamless and welded profiles.

4.3.5. T / WT PROFILE

Rolled profile obtained from ABNT NBR 15980:2011 – Perfis laminados de aço para uso estrutural – Dimensões e tolerâncias [2], Catálogo Perfis Estruturais Gerdau - Tabela de bitolas [3] and welded profiles from good engineering practices. Figure 5 presents its cross section and Table 23 to Table 26 present their properties and dimensions.
