SUMMARY

1	OBJECTIVE	3
2	REFERENCE DOCUMENTS	3
	2.1 PETROBRAS Standards	3
3	GLOSSARY	3
4	OPERATIONAL MODES	3
	4.1 General Conditions	3

1 OBJECTIVE

This Technical Specification defines the Operational Modes for each system, process or equipment of a Stationary Production Unit. It should be used as a reference for the General Technical Description - BOT.

2 REFERENCE DOCUMENTS

2.1 PETROBRAS Standards

Filosofia de Operação e Manutenção para Unidade Estacionária de Produção (DR-ENGP-M-I-1.23_R4)

3 GLOSSARY

- AEPR = Automation and Electrical Panels Room
- BOT = Build, Operate and Transfer
- CCR = Central Control Room
- CSS = Control and Safety System
- ESA = Electrical System Automation
- HMI = Human-Machine Interface
- O&M = Operation and Maintenance
- Operation = Actuation
- SOS = Supervision and Operation System
- Supervision = Monitoring

4 OPERATIONAL MODES

4.1 General Conditions

	TECHNICAL SPECIFICATION	I-ET-3010.00-1200-000-P61-002	REV. 0
BR	E&P	SHEET: 4	_{de} 21
PETROBRAS	TÍTLE: OPERATIONAL M		ERNA
	OPERATIONAL IVI	GPP-E&P	/EAEP/SPPO

- 4.1.1 Operational processes shall be identified and mapped. The activities and tasks necessary for executing them, especially those considered critical, shall be detailed proceeded and standardized.
- 4.1.2 Each operational process, where applicable, shall have an Operational Mode defined in order to serve as a subsidy in the tasks identification.
- 4.1.3 The Operational Modes defines the automation levels required to actuate and monitor the main equipment of the stationary production unit.
- 4.1.4 The Operational Modes shall be defined considering the processes, the variables, workers' exposure to risk under normal operating conditions, emergency and response time to maintain operability and safety levels.
- 4.1.5 Priority shall be given to remote operation of equipment through the operating stations in the CCR.
- 4.1.6 The Operational Modes for stationary production units are:

Operational Mode 1 (MOP1)

Operation, Supervision and Control are executed locally by the Operator at the equipment.

Note: When the Operational Mode is not specified, MOP1 shall be the reference mode to be adopted, if compatible with such operation. It can also be present, in a complementary way, within more complex Operational Modes.

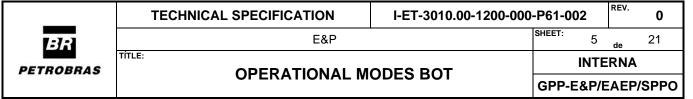

Operational Mode 2 (MOP2)

Operation, Supervision and Control are remote at the CCR. Operation and Supervision executed by HMI of the SOS. Control and Interlock executed by CSS.

Operational Mode 3 (MOP3)

Operation, Supervision and Control are locally executed at the equipment, through the dedicated HMI of the local panel. Remote supervision summary is available on SOS' HMI's.

Operational Mode 4 (MOP4)

Operation, Supervision and Control are remotely executed through the HMI of the panels installed at the AEPR. Remote supervision summary is available on SOS' HMI's.

Operational Mode 5 (MOP5)

Operation, Supervision and Control are remotely executed through the HMI of the panel installed at the AEPR. It is also available a dedicated HMI at the CCR. Remote supervision summary and relevant variables are available on SOS' HMI's.

Operational Mode 6 (MOP6)

Operation, Supervision and Control are remotely executed through the HMI of the panel installed at the AEPR. It is also available a shared HMI at the CCR. Partial Remote operation and remote supervision summary is available on SOS' HMIs.

• Operational Mode 7 (MOP7)

Operation, Supervision and Control are remotely executed through the HMI of the panel installed at the AEPR. It is also available a dedicated HMI at the CCR. Operation and supervision can also be remotely executed through the SOS' HMIs at the CCR.

Operational Mode 8 (MOP8)

Operation and Supervision are executed at the equipment or through the ESA (Electrical System Automation) at AEPR. It is also available a redundant ESA at the CCR.

• Operational Mode 9 (MOP9)

Operation, Supervision and Control are executed locally at the equipment by the Operator. Only remote supervision is available at the AEPR (ESA) and at the CCR (redundant ESA).

- 4.1.7 All equipment in the production facility that requires routine manual operations/maneuvers must have a permanent structure for access.
- 4.1.8 For processes that have automatic activation defined in accordance with safety requirements, Operation Mode 2 (MOP2) must be adopted as a reference mode, such as

	TECHNICAL SPECIFICATION	I-ET-3010.00-1200-000	-P61-002	REV.	0
BR	E&P		SHEET:	de	21
PETROBRAS	TÍTLE: OPERATIONAL M	ODES BOT	IN ⁻	TERNA	
 	OPERATIONAL IVI	ODES BOT	GPP-E&F	/EAEP	/SPPO

Fire Fighting Pumps, Jockey Pumps and Water Mist Systems. However, these systems must also have remote manual and local manual activation options,

- 4.1.9 When mentioned Operation, Supervision or Local Control, this location is the equipment or close to it (panel, button panel, etc.) and when it is remote, it can be either in the CCR or in the AEPR, properly identified in each Operation Mode.
- 4.1.10 The summary of the Operational Modes is presented on Table 01. Tables 02 to 14 present the Operational Modes for each system or equipment.

- Dedicated HMI Exclusive HMI for Operation and Supervision of one determined equipment / system.
- Whenever there is no mention, Integral Operation / Supervision shall be considered as: All data, information and variables acquired by the associated control system will be available at the associated HMI.
- Main Commands Comands that act in the process for the most relevant actions.
- Summary UAM, UAS, ON, OFF and Shutdown.
- Relevant variables Process variables, status and equipment indications for issues which are considered relevant for Operation and Supervision of the process.
